

Muszynianka[®]

Muszynianka mineral water is obtained from wells located in the Popradzki National Park in Muszyna. Muszynianka is an alkaline, bicarbonate, magnesium and calcium water, with high contents of minerals. The mineral ingredients of Muszynianka exert several health benefits and positively influence mood. Muszynianka helps to improve metabolism and functions of the majority of internal organs.

As an acidulous mineral water, it can be used in prevention and treatment of various diseases. Deposits of Muszynianka mineral waters are unique in Europe because of their high magnesium contents. Choose from the BLUE (carbonated) or GREEN (lightly carbonated) mineral waters offered in four different sizes. Muszynianka is exclusively distributed in The United States by Square Enterprises Corporation.

Natural sparkling mineral water

Sparkling mineral water

MAGNESIUM is extremely important for correct development of live organisms, as it is involved in almost 300 various bio-chemical processes. It governs correct activity of the immunological, nervous and muscular systems and prevents cancer and development disorders, cardiovascular atherosclerosis, heart strokes and renal calculosis. It reduces nervous tension, sleep disorders and stress, as well as harmful effects of spirit consumption on human organism. It can also counteract poisoning with lead, fluorine and mercury alloys and neutralise effects of industrial pollution. 1,5 litre of MUSZYNIANKA provides recommended daily dose of magnesium.

CALCIUM is the main construction material of bones and teeth and it also regulates balance in neuro-muscular excitability; it maintains correct blood clotting capability, prevents excessive permeability of the walls of blood vessels in allergy states, prevents osteoporosis and in combination with magnesium - reduces the transition of heavy metal ions from intestines to vessels.

POTASSIUM is involved in skeletal and heart muscle contractions, in conducting nervous stimuli, enzymatic activity and - in combination with magnesium - it guarantees the maintenance of cellular homeostasis.

IRON is a component of blood, muscles and enzymes and is involved in processes of tissue respiration.

LITHIUM makes people nicer, more friendly and more resistant to addictions to alcohol and drugs. Lithium deficiency often leads to depression, apathy and psychoses.

SODIUM plays an important role in regulating water management in the organism.
